Engineering the Money Layer for Africa's SMEs

Proposal to Dime

Dime Company

Two Rivers Mall, Limuru Road
P.O. Box 8628–00100, Nairobi
Tel: 0768 528200 / 0762 528200
Email: info@dime.co.ke

This proposal is addressed to Dime Company and covers the proposed digital solution for the mobile-phone-on-credit business operated through Dime.

1. Executive Summary

Asenatic Digital proposes to deploy a digital platform for Dime that enables the controlled sale and management of mobile phones on credit. The platform is designed to support Dime's institutional partner markets—where organisations have MOUs with Dime to extend credit to their staff—as well as members of the public seeking to acquire mobile phones through credit arrangements.

The solution brings customer accounts, phone inventory, repayment schedules, transaction activity and deployment information into one operating environment. It is intended to give Dime a clear view of what has been deployed into the market, what has been paid for, what is past due, and where deployed devices are recorded.

The proposal is structured around three commercial components: a one-time setup and onboarding fee, a monthly Digital-Care service, and transaction processing charges based on the payment channel used.

2. Proposed Solution

Capability	What it Enables
Client Account Management	Create and maintain customer accounts and manage the customer lifecycle.
Phone Inventory Management	Load and maintain records of mobile phone inventory, including device identification and deployment status.
Credit Deployment	Assign a specific phone to a customer together with the agreed repayment cycle and designated payment periods.
Repayment Cycle Management	Support daily, weekly or monthly payment cycles and track expected payments against actual transactions.
Portfolio Dashboard	Provide management visibility of phones deployed, phones paid for, outstanding accounts and past-due accounts.
Deployment Location Visibility	Maintain recorded location information for deployed devices so Dime can understand where financed phones have been placed.
Transaction Processing	Support payment processing through supported mobile money and card channels, with transaction activity captured for reconciliation.
Operational Visibility	Bring customer, inventory, payment and deployment information into one operating environment.

3. How the Platform Supports Dime

- 1. Establish the customer:** Dime creates the client account and captures the information required for the credit relationship.
- 2. Register the phone:** The relevant phone is loaded into inventory with its identifying details.
- 3. Deploy the phone:** The phone is assigned to the customer together with the agreed payment frequency and repayment periods.
- 4. Receive and record payments:** Payments made through supported mobile money or card channels are recorded against the relevant customer/phone account.
- 5. Monitor the portfolio:** Management can view deployment, repayment, outstanding and past-due positions through the dashboard.
- 6. Manage the market:** Dime can use the resulting operational information to follow up customers, manage deployed inventory and understand portfolio performance.

4. Commercial Proposal

Component	Fee	Payment Structure	Scope
One-Time Setup & Onboarding	KSh 100,000	30% / 40% / 30%	Configuration, onboarding, API integration and relevant system connections, commissioning and initial deployment support.
Digital-Care	KSh 10,000 / month	Monthly	Hosting, system updates, improvements and routine digital maintenance/support.
Mobile Money Transaction Processing	0.75% per transaction	As transactions occur	Processing fee for successful mobile-money transactions processed through the platform.
Card Transaction Processing	2.75% per transaction	As transactions occur	Processing fee for successful card transactions processed through the platform.

Illustrative transaction examples: A KSh 10,000 mobile-money payment would attract a KSh 75 processing fee at 0.75%; a KSh 10,000 card payment would attract a KSh 275 processing fee at 2.75%.

5. Setup & Onboarding Payment Milestones

Milestone	Purpose	Description
30% — KSh 30,000	Mobilisation	Payable at commencement to initiate configuration, API integration and connections with relevant systems.
40% — KSh 40,000	Pre-Commissioning	Payable immediately before the system is commissioned and made ready for operational use.
30% — KSh 30,000	Post-First-Sale Review	Payable two weeks after the first phone is sold on the market, allowing Dime to identify issues requiring adjustment against the agreed configuration.

6. Digital-Care Service

The Digital-Care service is intended to keep the platform operational after deployment so that Dime can focus on customer acquisition, credit deployment and portfolio management rather than day-to-day technical maintenance.

- Cloud hosting and routine platform administration.
- Routine system updates and maintenance.
- Continuous improvements to the configured solution within the agreed service scope.
- Operational support for issues affecting normal use of the platform.
- Monitoring of the deployed application environment and supporting services.
- Ongoing attention to the reliability of the platform as Dime's deployment grows.

7. Deployment & Implementation Approach

Phase	Activity
Discovery & Configuration	Confirm Dime's customer journey, credit rules, payment cycles, inventory fields, reporting requirements and deployment workflow.
Integration	Connect the platform to agreed payment/API and relevant external systems, subject to access credentials, documentation and third-party availability.
Testing	Test customer creation, inventory assignment, repayment schedules, payment processing, dashboard reporting and exception handling.
Commissioning	Move the configured system into operational use once agreed acceptance criteria have been met.
Pilot Deployment	Support the first market deployment and monitor the initial operating cycle.
Stabilisation Review	Two weeks after the first phone sale, review issues raised by users and make agreed configuration refinements.

8. Working Assumptions

- Dime will provide timely access to the relevant API documentation, credentials, business rules and third-party contacts required for integration.
- Any third-party charges imposed by banks, mobile-money providers, card schemes, payment processors or other external services are separate unless expressly included in the final deployment agreement.
- The final configuration will be based on requirements agreed during the discovery and implementation process.
- Changes that materially expand the agreed scope may be assessed separately and agreed before implementation.
- The Digital-Care fee covers the recurring service described in this proposal; major new modules or materially new integrations may require a separate quotation.

9. Next Steps

We propose that this document serve as the basis for an initial working session between Dime and Asenatic Digital. The meeting can be used to walk through the deployment dynamics, customer journey, inventory controls, repayment cycles, payment integrations, reporting requirements, operational responsibilities and any other issues that should be incorporated before implementation begins.

- Confirm the business and operational requirements.
- Review the proposed system workflow and dashboard requirements.
- Confirm required integrations and access arrangements.
- Agree implementation scope and acceptance criteria.

- Confirm commencement date and mobilisation payment.

10. Payment Details

Payments to Asenatic Digital

M-Pesa Paybill No.: 4091961

Account No.: Dime

M-Pesa confirmation should read, 'Paid To: Asenatic Enterprises'
